The Board meeting and reception

Under the chairmanship of the South Centre Board Chair H. E. Mr. Benjamin William Mkapa, former President of the United Republic of Tanzania, the Board of the South Centre held its 32nd meeting on 17 and 18 March 2014 in Geneva. The Board is the governance body of the South Centre that is tasked to review and approve the work programme and the annual budget of the South Centre, and report on these to the Council of Representatives of the Member States of the South Centre which serves as the highest policymaking body of the organisation.

At its 32nd meeting, the Board reviewed the Centre’s activities that were undertaken in 2013 and approved the work plan for 2014. The Board also reviewed the Centre’s financial status and approved its budget for 2014. The Board also agreed to nominate two new Board members. They are Dr. Omar El-Arini from Egypt, former Chief Officer of the Multilateral Fund for the Implementation of the Montreal Protocol and current Senior Advisor to the government of Egypt in the area of environment and elected member of the Board of the Green Climate Fund, representing Africa for the period 2012-2015, and Mr. Yang Wenchang from China, current President of the Chinese People’s Institute of Foreign Affairs and former Vice Foreign Minister of China (1998-2003), former Commissioner of the Ministry of Foreign Affairs of China in the Hong Kong Special Administrative Region and former Ambassador of China to Singapore. They also agreed to extend Dr. Charles Soludo’s term as a Board member for another three years.

The African Union (AU) Trade Commissioner, H. E. Mrs. Fatima Haram Acyl, paid a visit to the South Centre during the Board meeting and gave a talk on the AU’s view on trade. The South Centre decided to have stronger cooperation with the AU.

A reception was hosted by the South Centre at its office on 17 March. It was attended by the Board members, ambassadors and senior officials...
from the permanent missions of the Member States of the South Centre and other developing countries, and of international organisations and NGOs based in Geneva. At the reception, Chairman Mhapa stressed the crucial importance to the South Centre of the continuing support being provided by its Member States and other developing countries in enabling the South Centre to carry out its mandate to strengthen South-South solidarity and unity in today’s global context. Chairman Mhapa expressed his appreciation for the work of the Board and of the Secretariat.

The AU Trade Commissioner also spoke at the reception and said that after the liberalization of Africa, the struggle now is economic, and there what we are really talking about is trade. She said that Africa has very huge challenges ahead, particularly the negotiations, for example, the Eco-
nomic Partnership Agreements, the bilateral investment treaties, the WTO and post-Bali and that as developing countries, we need to stand together, speak with one voice and really mean it, and ask ourselves how do we fight and ensure our interests are preserved. She also expressed appreciation for the help the AU as well as the African countries are receiving from the South Centre. They are very proud of the Centre’s work and look forward to working more with the Centre including in other areas such as mining, investment, and intellectual property rights.

During the reception, a book launch of The Third World in the Third Millennium CE, The Journey from Colonialism Towards Sovereign Equality and Justice by Chakravarthi Raghavan, Editor Emeritus of the South-North Development Monitor (SUNS) and trade expert, was held (see next article in this bulletin).

Prof. Deepak Nayyar, Vice Chair of the South Centre Board, had come to the end of his term. The South Centre bade him farewell and expressed its gratitude to his service during the reception. Prof. Nayyar served at the South Centre Board for nine years, his last three years as Vice Chair. Chairman Mkapa conveyed that he was a very diligent member of the Board and that as Vice Chair he had made his tasks lighter. Prof. Nayyar was in charge of the Finance Committee and the Chair articulated that he had done very well in that job. He also emphasised that Prof. Nayyar was a great thinker – a South, economic, and social thinker. Prof. Nayyar expressed that serving at the Board of the Centre has been a source of great joy and satisfaction. He said that the last five years, in retrospect, was incredible, in restoring the confidence in the South Centre of the stakeholders and that this was a product of teamwork. He is leaving with a sense of comfort that this institution has grown stronger.

The South Centre also bade farewell and conveyed its thanks to Board member Minister Li Zhaoxing, who was also very instrumental for the organisation.

Meeting of the Council of Representatives

The 15th meeting of the Council of Representatives of the Member States of the South Centre took place on the afternoon of 18 March at the Palais des Nations, and was attended by the ambassadors and senior officials of the Member States. It was chaired by the Convenor of the Council, Ambassador Abdul Minty of South Africa.

The Council heard the report of Mr. Martin Khor, Executive Director of the South Centre Secretariat, on the Centre’s activities and financial situation. The Convenor and the Chairman of the Board encouraged all Member States to ensure their continued financial support to the Centre as the best means for strengthening the Centre’s ability to support the South in various multilateral forums.

Many representatives of the South Centre’s Member States spoke in appreciation of the Centre’s work and its activities during 2013, particularly in terms of the assistance provided by the Centre to developing countries in negotiations at the WTO, WIPO, UNCTAD, UNFCCC, WMO, and on issues relating to the global economy, the global financial crisis, sustainable development, health and the right to development. The research output of the Centre was appreciated by the representatives for their quality, usefulness, and ability to provide developing country perspectives on global issues. The Member States also appreciated that the Centre’s financial situation had improved, with an increased operational surplus in 2013 following on from the operational surpluses generated in 2009-2012. Among the Member States whose representatives
spoke were Algeria, Barbados, China, Cuba, Ecuador, Egypt, India, Indonesia, Iran, Jamaica, Malaysia, Pakistan, South Africa, Tanzania, Venezuela and Zimbabwe.

The Chairman of the Board then put forward for the consideration of the Council of Representatives Dr. Charles Soludo’s second three-year term of membership of the Board and the Board’s nomination of Dr. Omar-El Arini and Mr. Yang Wenchang to serve on the Board of the South Centre. These were unanimously approved by the Council.

Launch of Raghavan’s new book

By Kanaga Raja

The South Centre on 17 March launched the publication ‘The Third World in the Third Millennium CE’, written by Mr. Chakravarthi Raghavan, Editor Emeritus of the South-North Development Monitor (SUNS).

The launch took place during an evening reception at the Centre, which was attended by some South Centre Board members as well as ambassadors and other officials.

The book, subtitled ‘The Journey from Colonialism Towards Sovereign Equality and Justice’, is the first of two volumes and is published by the Third World Network.

At the South Centre reception, Mr. Martin Khor, the Executive Director of the South Centre, introduced Mr. Raghavan to the assembled audience, saying that Mr. Raghavan had been associated with the South Centre long before the South Centre was even born.

He noted that Mr. Raghavan had brought to the attention of the then South Commission, whose Secretary-General was Dr. Manmohan Singh at the time (and who is the former Indian Prime Minister), that something was going on in Geneva called the Uruguay Round.

Mr. Khor recalled that Mr. Raghavan had written a 20-page paper on this subject that was later publicised by the Third World Network.

(The paper was later expanded into the book ‘Recolonization: GATT, the Uruguay Round & the Third World’.)

He went on to say that Mr. Raghavan has been writing about multilateral negotiations, not only the GATT and the World Trade Organization (WTO), but also on many other issues.

Referring to Mr. Raghavan’s book, Mr. Khor said that this is the first volume of a compilation of the many papers that Mr. Raghavan had written over the past 20 to 30 years.

He noted that the foreword to the book was written by Mr. Rubens Ricu-
pero, a South Centre Board member and a former Secretary-General of the UN Conference on Trade and Development (from 1995-2004).

In launching the publication at the reception, Professor Deepak Nayyar, Emeritus Professor of Economics at Jawaharlal Nehru University and a Member of the South Centre Board, said that he had known Mr. Raghavan longer than has Mr. Ricupero (who had been originally slated to launch the book at the reception but had to excuse himself on account of being unwell on that day).

Prof. Nayyar said that he has known Mr. Raghavan for close to 30 years, adding that he had first met Mr. Raghavan in the early eighties when Prof. Nayyar had chaired some 'contentious' committees on services in Geneva during the Uruguay Round.

"May I say that Mr. Raghavan is a most unusual person. He is a person who has a belief system and a courage of conviction, and a moral strength that is increasingly difficult to find these days in almost every walk of life but particularly in the world of journalism," he said.

Prof. Nayyar said he remembered vividly the early days when Mr. Raghavan had started the SUNS - and as Mr. Ricupero has said in the foreword to the book - "it was an idea in the head and a typewriter in hand" in a small cubicle in the Palais des Nations (the UN's European headquarters in Geneva) where his office was.

He recounted that Mr. Raghavan was banging away at the typewriter producing column after column of rigorous analysis and authentic information about what was happening in the world of multilateral trade negotiations.

"In this world of internet and the information explosion, it's hard to recognise that this made an enormous difference," said Prof. Nayyar.

Prof. Nayyar then said that he had first met Mr. Ricupero soon after he came to Geneva as Brazil's Ambassador to the GATT, and Mr. Ricupero had told him - as have many of his colleagues who were ambassadors such as Ambassadors S. P. Shukla and Bhagirath Lal Das - that Mr. Raghavan was in a sense a 'tutor' to all the ambassadors to the GATT.

According to Prof. Nayyar, this was because Mr. Raghavan had a kind of accumulated knowledge and internalised understanding which professional diplomats who had just arrived in Geneva found a wonderful reservoir to draw upon.

"And he was a fantastic support to all of them," observed Prof. Nayyar, noting that Mr. Ricupero had also pointed that out in his foreword to the book.

Prof. Nayyar also recounted a story which he said he had not told Mr. Raghavan till now, when both he and former US Trade Representative Clayton K. Yeutter (1985-1989) were at a small brainstorming session somewhere in Austria, where Yeutter had said to him over a drink in the evening that 'you know, I hate Ambassador Shukla's guts. He's a real nuisance to me, but I would give twenty of my best people to have one Shukla on my side.'

Prof. Nayyar recalled Yeutter as also saying about Mr. Raghavan that 'I hate Raghavan's guts. He is a real nuisance but he has a capacity to tell the truth, to tell it clearly and to tell it firmly'.

Prof. Nayyar said that Mr. Raghavan in that sense is very unusual, noting that standards (in the world of journalism) "have slowly but surely deteriorated" in terms of morality, beliefs and convictions, but that the journalist's task is much more difficult because it is about writing contemporary history.

In this context, Prof. Nayyar noted that the historian Eric Hobsbawm, who passed away not so long ago, used to write the history of his own times.

"In many ways, I think Raghavan's perceptive writings over the years - and I'm sure these volumes will bring it to light - have had a kind of clairvoyant contact because they foresaw some things to come."

"For that, I think much credit is due," said Prof. Nayyar, adding, however, that this is not the credit Mr. Raghavan will get.

The credit he will get, as Mr. Ricupero says (in his foreword), is the esteemed gratitude and admiration of those friends or professional colleagues who have known him for a lifetime, for the person that he is, not just for his professional qualities but for his human qualities (as well), said Prof. Nayyar.

He ended with an epitaph from Mr. Ricupero's foreword to the book in that Mr. Raghavan "has helped us rescue knowledge from the world of information and wisdom from the world of knowledge because he is able to see the wood from the trees."

Dr. Yilmaz Akyuz, Chief Economist
at the South Centre and a former chief economist of UNCTAD, recounted that
when he was at UNCTAD, he was following in the publication SUNS not
only what was happening in Geneva but also at UNCTAD, and that in his
writings, Mr. Raghavan often commented particularly on (UNCTAD's
flagship publication) the Trade and Development Report.

"And from time to time we could
find things which we didn't realise that
we [had] said," Dr. Akyuz said, adding
that in discussions (among friends), it
was asked, 'did we really say that? This
is quite interesting.'

He said that Mr. Raghavan was tak-
ing the report and putting the natural
consequences - "perhaps we were too
shy to do it being in the UN bureauca-
cy" - and in this process, they learned a
lot not just in terms of analysis and
events but also in terms of the politics
of the international system.

Mr. Raghavan then spoke and in
thanking the audience, he remarked
that fortunately God had given him a
natural tan, hence, he could not blush.

"I don't think I have done anything
very extraordinary at least not very
different from what people of my gen-
eration were taught or we learned," he
said, pointing out that he grew up in
colonial India, in a place called Madras,
where as he grew up he came into con-
tact with some big personalities (of the
Independence movement).

Pointing out that he was a physics
graduate and that he did not know
anything at all about economics and
was in fact trying to qualify in actuarial
science, Mr. Raghavan said that he had
met Mahatma Gandhi and spent 10
days with him at a camp in 1945 and
that had changed his entire outlook in
life, and eventually led him to come to
Geneva.

As far as his book is concerned, Mr.
Raghavan said that the editors (at
Third World Network) had put togeth-
er "what we thought from all my writ-
ings, things that may be of some more
lasting value than the ephemeral daily
reports of news and views."

He noted that most of the material
was typewritten and had to be digitalised,
and that when this was done, it
was found that there was a need to
connect the past with the present, oth-
erwise, it did not make any sense in
merely reporting what had happened
in Geneva or in New York between
those years that were covered in the
book.

It was also decided that trade was to
be separated from everything else, be-
cause "trade itself is a peculiar animal,
and we don't know what kind of an
animal it has come from and where it is
going to go."

Mr. Raghavan recalled that it took
him quite a while to write the connect-
ing history, asking 'how do you write
what happened before the war', as he
did not write before the war.

He said that in India, he did not
write under his own name, and that
the first time he wrote under his own
name was when he came to Geneva
and that it was translated and pub-
lished in Spanish.

"And I suddenly became a very fa-
mous person in Latin America but not
even in India."

Mr. Raghavan further said that he
tried to connect the past with the pre-
sent and he did look up and as far as
possible, provided footnotes so that
people can also look at it and see
whether what he was saying was cor-
rect or whether he was just bluffing.

He had also tried to provide a dif-
ferent narration. He explained later
that there were two kinds of narration
of the past. One was a paternalistic
view of imperialism and colonialism
and the attempts of metropolitan pow-
ers to "civilize", modernize and im-
prove conditions of people and bring
them up to self-governance. The other
was the Niall Ferguson variety of justi-
fication and praise of imperialism.

He said that he did what he could
from a different perspective, merely in
order to tell that it is not as if people in
the past have not lived through this
and "those who forget the past cannot
have a future or rather cannot influ-
ence the future. That is the one partic-
ular aspect of life we all need to re-
member."

He expressed hope that the audi-
ence would enjoy his book and draw
some benefit out of it.

In any event, Mr. Raghavan con-
cluded, as the saying goes in his part
of the world: `if you are prepared to
discard what I have said [as] utter
nonsense, then you should not hesitate
to say so.'

journalist who writes for the South-
North Development Monitor (SUNS).
South Centre Conference:

The Global Economy and State of Multilateral Negotiations

The South Centre convened its annual conference entitled “The Global Economy and State of Multilateral Negotiations”, on the 19th of March 2014 at the Palais des Nations in Geneva. The conference served as an opportunity to reflect on the state of the South and the world economy through two major sessions; one was dedicated to discussing the state of the global economy and another addressed trade and development issues, including the state of multilateral negotiations.

Reports on the Conference written by Kinda Mohammadieh

Chairman Benjamin W. Mkapa’s Opening Speech

On behalf of the South Centre, I welcome you to our conference, being held in conjunction with the meetings of the Council and Board of the Centre.

The themes of the conference are the global economy, which will be discussed this morning, and the state of multilateral negotiations, in the afternoon.

We have chosen these topics because the Centre believes that the global economic conditions and how they affect developing countries is now a crucial issue that will be of immense importance to our policy makers and political leaders. On the other hand, the South Centre’s bread and butter activity is to help developing countries with multilateral negotiations, and a review of some of these negotiations is very topical.

We have assembled some eminent experts of the South to address these issues, and we are very happy that you have assembled here to discuss what they have to say.

The global economy has not really recovered from the 2008 financial crisis. Indeed, the South Centre predicted that when the Western economies begin their recovery, the developing countries would be in even bigger trouble. Reality is now showing that our prediction has been correct.

The developed countries have made policy choices during their crisis that in our view were not appropriate either for their own economies or for the global economy. Their policies are hurting the developing countries. For example, due to their easy money policies, a lot of speculative capital went into the developing countries. This boom created problems including inflation, asset bubbles, and exchange rate appreciation that reduced our export competitiveness.

Now that the US easy money policy is tapering or being reduced, the reverse problems are evident. Capital is flowing out of developing countries back to the US and Europe, and currencies are depreciating, making it harder to service external debt. The balance of payments deficits of some countries are widening. The prospects for commodity prices are not bright. The GNP growth rate has reduced.

We are waiting eagerly to listen to our own South Centre chief economist, and to the many other experts in the first panel. Can developing countries do anything to get the developed countries to correct their policies? Can developing countries do something to defend themselves if the misguided policies of
the West continue? How will developing countries be affected and what can they do?

The second panel discussion is equally interesting. The crucial negotiations now taking place are about trade, about intellectual property, and about the post-2015 development agenda and the SDGs. We have eminent experts to address the WTO’s Bali outcome and the post-Bali agenda. We also have experts who will discuss the commodities issue, and the issue of climate change from indigenous peoples’ perspective.

As for myself, I believe that the Economic Partnership Agreement which the EU is trying to get African countries to agree to, is the most critical trade and negotiations issue facing Africa. If the EU’s model is accepted, it would cause immense damage to our agriculture, industry and development prospects. It will also make it very difficult if not impossible to achieve effective economic integration within the African continent, which has been a dream of our political leaders since independence.

Dr. Yilmaz Akyuz, chief economist of the South Centre, delivering the keynote speech of the first session.

Dr. Yilmaz Akyuz, chief economist of the South Centre, gave his keynote speech during the conference.

I understand that in Geneva, the WTO negotiations have revived, and with this revival come many opportunities and dangers. The most important principle is that the development dimension and objective of the Doha Development Agenda must be respected and adhered to not only in rhetoric but in the outcomes. Otherwise it is better to continue fighting for it, than to give in to the developed countries, just because we want to conclude the negotiations.

On the SDGs and post-2015 development agenda, the South Centre has done a lot of work in this area, and I look forward to listening to the discussion on this, as well as on commodities.

I wish all of you good discussions at this conference, which I now declare opened. Thank you.

A view of the audience during the South Centre conference.

North’s policies affecting South’s economies
tion there are new fragilities added due to the ultra easy monetary policy.

Moreover, China is not only moving to slower growth but can also face hard landing due to the debt overhang created by its response to fallouts from the crisis, Akyuz added. According to him, the situation of China is becoming a problem rather than a solution. Furthermore, Akyuz was of the opinion that developing countries have not responded to the situation properly, thus often failing to manage booms in commodity prices and capital flows, which made them vulnerable to financial shocks.

The policy response to the crisis has been an inconsistent policy mix, including fiscal austerity and ultra-easy monetary policy, Akyuz explained. While the crisis was created by finance, the solution was still sought through finance, he cautioned. Countries focused on a search for a finance-driven boom in private spending via asset price bubbles and credit expansion. Fiscal policy has been invariably tight. The ultra-easy monetary policy created over USD 1 trillion fiscal benefits in the United States, which was more than the initial fiscal stimulus, Akyuz noted. The entire initial fiscal stimulus in the United States was limited to USD 800 billion.

Akyuz indicated that there was reluctance to remove debt overhang through comprehensive restructuring (i.e. for mortgages in the United States and sovereign and bank debt in the European Union). Thus, the focus was on bailing out creditors, he noted. There was also reluctance to remove mortgage overhang and no attempt to tax the rich and support the poor – particularly in United Kingdom and the United States - where marginal tax rates are low compared to continental Europe, Akyuz added. There has been resistance against permanent monetization of public deficits and debt, which according to Akyuz does not pose more dangers for prices and financial stability compared to the ultra-easy monetary policy.

Akyuz noted that the International Monetary Fund (IMF) and central banks have been releasing evidence that without the ultra-easy monetary policy the crisis would have been deeper. Yet, there is no discussion of an alternative policy mix, including debt workouts and fiscal stimulus nor attempts to discuss what outcome could have resulted from such alternative interventions, he stressed.

Akyuz reviewed the situation in various regions. According to him, the situation in the United States has been better than other advanced economies. The United States dealt with the financial but not with the economic crisis, whereby recovery has been slow due to fiscal drag and debt overhang, he explained. Akyuz noted that employment is not expected to return to pre-crisis levels in the United States before 2018.

As for the Euro Zone, Japan, and the United Kingdom, Akyuz noted that all had second or third dips since 2008. None of them have restored pre-crisis incomes and jobs, Akyuz added. The Euro Zone has been struggling to turn the corner from recession to recovery, according to the IMF. Akyuz highlighted the prospects of seeing the Euro Zone heading into deflation. He highlighted the weak demand, which stands at 5% below 2008 levels, including 15% lower than 2008 levels in the periphery countries. Financial stress has eased in the Euro Zone, although there is still high fragility and more turmoil could be possible in 2014, Akyuz noted. According to him, the recovery has been too weak to generate jobs and the jury is still out on the situation of the Euro.

Advanced economies, including the United States, European Union, and Japan have witnessed potential output constantly falling below usual trends because of the lack of investment and declines in labor participation, according to Akyuz.

He added that inequality has been widening, whereby the top 1% in the United States captured the entire income gains in 2009, and wealth has been further concentrated. Bank profits soared and Wall Street bonuses have been back to historical highs, while the ‘too-big-to-fail’ banks are today bigger, Akyuz added.

In the Euro Zone, the periphery has joined Germany in the trend of wage suppression, Akyuz noted. Real wages in the United Kingdom are not expected to go back to pre-crisis levels before 2020 even with accelerated growth, he added. Downward trend in the share of wages has been accentuated, Akyuz highlighted, whereby the threat of deflation due to under-consumption has been rising. Until 2008, deflation was avoided thanks to bubbles in the United States and the European Union and several emerging economies. These bubbles have led to deepening fragility and crisis. Yet, what is witnessed today is a temptation to rely once again on asset and credit bubbles for growth, Akyuz added. He noted that Lawrence Summers and Paul Krugman argue that there is a constant demand gap in the United States, which would face circular stagnation without bubbles that have been driving growth since the 1980s.

Akyuz addressed trade imbalances noting that they have not been removed, but redistributed. East Asian surplus dropped sharply and Latin America and Sub-Saharan Africa moved to large deficits, Akyuz noted. Developing countries’ surplus fell from USD 720 billion to USD 260 billion. On the contrary, advanced economies moved from deficit to surplus, whereby the United States’ deficits fell and the Euro Zone moved from USD 100 billion deficits to USD 300 billion surplus.

Of three main surplus countries, Japan started running deficits from mid-2013 while China’s surplus declined sharply after 2007, Akyuz added. Germany replaced China with a surplus of 7% of GDP. Unlike in China where strong exports complemented buoyant domestic spending, in Germany exports offset sluggish domestic demand, Akyuz explained. The German surplus has been falling against that of the Euro Zone periphery, Akyuz explained, but rising against the rest of the world. Competitive disinflation (i.e. internal devaluation), lid on wages and domestic demand, and deflationary bias are witnessed across the world economy and not just in the Euro Zone, he added.

Akyuz noted that until recently the impact of easy monetary policy has been felt mainly in asset markets, stocks hitting historical highs without much wealth effect, and in surges in capital flows and bubbles in emerging economies. But household borrowing in the United States has been rising again, Akyuz noted, whereby the last quarter of 2013 saw the largest increase in household debt in the United States since 2007.

Ultra-easy monetary policy is still
on, Akyuz stressed, whereby interest rates are still unchanged. He clarified that tapering is not tightening or exiting from the ultra-easy monetary policy.Exiting this policy would mean reducing and normalization of the Federal Reserve's balance sheet and shortening maturity of assets held by the Federal Reserve. Yet, there is still uncertainty about normalization of the Federal Reserve's balance sheet. Akyuz stressed that it would be difficult for the Federal Reserve to exit without disruption, or to maintain its policy without creating bubbles. The longer the ultra-easy monetary policy is kept the more abrupt the exit would be, Akyuz noted, which creates a dilemma for emerging economies.

Akyuz highlighted that as tapering comes to an end and the Federal Reserve stops buying further assets, the attention will be turned to the question of exit, normalization, and the expectations of increased instability of financial markets for both the United States and the emerging economies. This exit will also create fiscal problems for the United States, he added. For as bonds held by the Federal Reserve mature and quantitative easing ends, long-term interest rates will rise and fiscal benefits of ultra-easy monetary policy would be reversed.

In regard to the South, Akyuz noted that the initial resilience of developing countries could be associated with three main reasons, including: the quick recovery of capital flows; the Chinese massive investment package that gave a boost to commodity exporters; and the countercyclical response in developing countries that was made possible by improved fiscal balances during pre-crisis expansion, thus allowing to shift focus to domestic demand.

However, developing countries have lost steam as recovery in advanced economies remained weak or absent due to the fading effect of countercyclical policies and the narrowing of policy space, Akyuz explained. He also added that China could not keep on investing and doing the same thing. Another factor contributing to the change of context in developing countries has been the weakened capital inflows that became highly unstable with the deepening of the Euro Zone crisis and then Federal Reserve's tapering. Several emerging economies have been under stress as markets are pricing-in normalization of monetary policy even before it has started, Akyuz pointed out.

Akyuz added that the external financial vulnerability of the South is linked to developing countries' integration in the global financial markets and the significant liberalization of external finance and capital accounts in these countries. These include opening up securities' markets, private borrowing abroad, resident outflows, and opening up to foreign banks. While developing countries did not manage capital flows adequately, the IMF did not support in this area, tolerating capital controls only as a last resort and on temporary basis.

Akyuz added that while sovereign debt in emerging economies is leveled off as proportion of GDP, foreign presence in local credit and bond markets have been increasing. Private borrowing abroad has been massive in China, India, and Brazil, while corporate bond issues and interbank borrowing have been at record levels in these countries, Akyuz noted. Many portfolio (carry-trade) investors in emerging economies are leveraged, he added, all of which are highly susceptible to swings in the United States' monetary policy.

Several deficit developing countries with asset, credit, and spending bubbles are particularly vulnerable, Akyuz stressed. Countries with strong foreign reserves and current account positions would not be insulated from shocks, as seen after the Lehman crisis. When a country is integrated in the international financial system it will feel the shock one way or another, although those countries with deficits remain more vulnerable, Akyuz stressed.

In regard to policy responses in the case of a renewed turmoil, Akyuz called for avoiding business-as-usual, including using reserves and borrowing from the IMF or advanced economies to finance large outflows. The IMF lends not to revive the economy, he noted, but to keep stable the debt levels and avoid default. He also argued against adjusting through retrenching and austerity.

Akyuz called for finding ways of bailing-in foreign investors and lenders, and using exchange controls and temporary debt standstills. Akyuz stressed that the IMF should support such approach through lending into arrears.

More importantly, Akyuz underlined, the Federal Reserve is responsible for the emergence of this situation and should take on its responsibility and act as a lender of last resort to emerging economies, through swaps or buying bonds as and when needed. These are not necessarily more toxic than the bonds issued at the time of subprime crisis, Akyuz noted. He was of the opinion that the United States has a lot at stake in the stability of emerging economies.

Akyuz also called for addressing systemic issues, including governance of international finance, which was addressed in the Outcome Document of the 2009 UN conference on the World Financial and Economic Crisis and its Impact on Development. Akyuz called upon developing countries to put this issue on the Post-2015 agenda.
Dr. Deepak Nayyar, emeritus professor of economics at Jawaharlal Nehru University and member of the South Centre’s board, addressed the situation of developing countries in the aftermath of the financial crisis, while focusing on their real economy variables. He noted that developing countries on the whole have fared better than industrialized and transition economies in the aftermath of the crisis. Yet, some high-income emerging economies that depend on exports to the United States and the European Union were hard hit, Nayyar noted. In contrast some large developing countries did not fare badly. For example, the growth performance of Sub-Saharan Africa and some least developed countries has been robust.

Dr. Nayyar explained that the impact of the global crisis was less adverse due to four factors, including the robust initial conditions before the crisis, specifically macroeconomic stability, moderate inflation, and large foreign exchange reserves combined with economic growth. All of these factors provided for structural stability at macro and micro levels, Nayyar noted. Other factors include the fact that the financial liberalization was somehow restrained in many developing countries, safety nets for the poor and vulnerable were in place, and domestic consumption was helpful in many of the large economies.

Professor Nayyar noted that the economic recovery of most developing countries was faster for three reasons. First was the fact that they adopted expansionary countercyclical macroeconomic policies, which have been unusual till then in the developing countries. Their response to the crisis was effective and fast. Second, the size of the home market made a difference, and the increase in demand came from segments of the population with a high propensity to consume. Third, the financial sectors were less fragile and more regulated than elsewhere, and did not absorb scarce resources from stimulus packages or bailouts. Easy monetary policies in these countries meant lending to the real sector, Nayyar underlined.

Generalizations are difficult when the underlying factors are different, Nayyar cautioned. Yet, there is little doubt that initial conditions, policy responses, and domestic demand shaped resilience, Nayyar added, while prudence in deregulation and liberalization of financial sectors made a difference along with fiscal space available to governments.

The significant increase in the share of developing countries in world income and trade meant that there were external resources and markets available to them, other than the industrialized countries.

This performance of several emerging economies led some analysts to the wrong conclusions, whereby they proposed that these countries could drive the recovery in the world economy, Nayyar cautioned. Yet, the ‘decoupling’ theory does not hold, Nayyar stressed. It is clear that these countries cannot turn into engines of growth for the world economy, and none of these countries could provide resources for development, finances for investment, or needed technologies as Britain did in the 19th century and the United States did in the 20th century, he added. Thus, the prospects and pace of recovery in the world economy depends on the pace and nature of recovery in the industrialized world, particularly in the United States.

Nayyar noted that recovery has been slow, uneven, and fragile, and prospects uncertain. It would seem that the problem has been compounded by the return to orthodox economic policies everywhere, he added. The United States and Japan seem an exception, whereby there is a recovery in output but not much in employment. In the European Union countries, decisions to sharply reduce fiscal deficits are being implemented. Nayyar noted that he sees those approaches as possibly turning out worse than the problem.

Many of the large developing countries, and the so-called ‘emerging economies’ such as Argentina, Indonesia, Turkey, China and others have experienced slowdown in growth attributed to the great recession in the developed economies, Nayyar explained. For China, the slow recovery in the United States and recession in the European Union have been challenging factors, given that exports to those markets were critical for China.

However, the slowdown in other larger developing countries is attributable significantly to their own mistakes, Nayyar stressed. Macroeconomic policies are back to being procyclical, high interest rates have stifled investments, attempts to reduce fiscal deficits have curbed public spending and domestic demand, strong exchange rates to sustain portfolio investment flows have effected export performance, and the dependence on these inflows of capital is currently greater. Nayyar pointed out that given this reality, it is not a surprise that the announcement of the phase-out of monetary easing in the United States is having such strong impact on these economies.

Again, these recent developments have led some analysts to hasty conclusions. In August 2013, Morgan Stanley presented Brazil, Indonesia, South Africa, Turkey, and India as the ‘fragile five’ economies, for they were too dependent on foreign capital inflows to finance their current account deficits and support their growth. Soon after, an asset management firm in Boston called ‘Fidelity’ coined the term ‘MINTs’, standing for Mexico, Indonesia, Nigeria, and Turkey. According to ‘Fidelity’, the ‘MINTs’ are emerging economies with a promising future since the BRICS (i.e. Brazil, Russia, India, China and South Africa) were running out of steam. Interestingly, Indonesia and Turkey feature in both groupings. It is clear that such thinking is shaped by the conjecture and framed in the shorter-term perspective, Nayyar stressed.

In the medium-term perspective
such thinking is inappropriate, if not misleading, Nayyar stressed. He pointed out that in contemplating the future of the world economy, it is essential to focus on a larger group of developing countries and a longer-term perspective rather than the next quarter or next year. The time horizon to consider should be 2025 instead of 2015, according to Nayyar.

Nayyar underlined that there is much that developing countries can do in terms of correcting their policies; they could redefine macroeconomic objectives and policies to make employment and growth the central objectives rather than focusing on managing inflation. They could also recognize that external markets are at best complements rather than substitutes to domestic markets. They could also begin to correct market fundamentalism and recognize the role of the state as critical for recovery and sustained growth.

In regard to the future prospects for larger developing countries, assuming that these corrections are introduced, Nayyar noted that there is potential for growth but with real constraints. The determinants of potential growth in developing countries are a source of good news, according to Nayyar, and in principle these countries could sustain high rates of growth for some time. These determinants include their population size that is large and income levels that are low. Thus, possibilities of growth are greater. Moreover, their high proportion of young people means that the increasing workforce is conducive to growth provided education spreads across society. Furthermore, their wages are significantly lower than the rest of the world, which is an important source of competitiveness.

In practice, the developing world will not be able to realize this potential due to constraints that may differ across space and time, Nayyar cautioned. There are some general constraints such as poor infrastructure, weak institutions, inadequate education, unstable politics, and poor governance. There are constraints that may arise from the process of growth such as economic exclusion, social conflict, and environmental stress. There are other constraints that are external, such as worsening terms of trade, inadequate sources of external finance, restricted market access, possible crisis in the world economy, in addition to other country-specific constraints.

Nayyar noted that the potential for growth comes on the demand side that could increase with human development and social progress.

In this process the real checks and balances come from political democracies. Nayyar concluded that in contemplating the future of developing countries, there is need to concentrate on a larger group of developing countries and not only emerging economies, think of longer-term horizons, and shift the focus from short-term equilibrium to longer-term growth and from the financial sector to the real sector of the economy.

**Four scenarios on world economy**

He was worried that policy makers in the South have been slow to register the kind of changes in the global economy and systemic weaknesses that have been documented by Dr. Yilmaz Akyuz. UNCTAD over the last few years has been critical of the ‘de-coupling mythology’, as he called it, which developing country policy makers themselves have bought into. UNCTAD has been warning that there is an interaction between the supply and demand sides. Wages could be seen as costs on the supply side, which is what orthodoxy chooses to focus on, Nayyar noted. But wages are also incomes on the demand side that could drive growth, Nayyar stressed. He called for combining economic growth with human development and social progress.

Dr. Richard Kozul-Wright, director of UNCTAD’s division on Globalization and Development Strategies (GDSD), commenced his presentation by underlining the likelihood of a much more difficult macroeconomic environment that could face the economies of the South in the medium-term.

---

**Dr. Richard Kozul-Wright** speaking at the South Centre conference.

---

Kozul-Wright explained that GDSD’s work identified four broad scenarios facing the world economy:

- The first scenario is a ‘muddling-through’ scenario, which is a continuation of slow growth, driven by efforts to rebalance private sector balance sheets and continued fiscal austerity in advanced economies. This is likely to be a world of sluggish investment and persistently high inequalities, continuing to hold back economic potential. This would come with a vague hope that somehow the ‘confidence fairy’ will return to the private sector and reinvigorate private demand in a way that could keep the recovery on track;
- The second scenario is of unsustainable economic growth, essentially faster growth driven by the build-up of debt in the private sector, in which housing booms would be a most likely source of expansion. Injection from
those asset booms of demand into the global economy would allow some economies to contemplate export-led recoveries based on which they would be able to revive their growth possibilities. This would be a world in which global imbalances are likely to grow and financial fragilities are likely to re-emerge;

- The third scenario is an instability scenario in which the recovery would be derailed by unruly unwinding of the monetary stimulus, which would likely lead to recurrence of financial shocks and to a combination of currency and banking crises. This would present serious policy challenges in emerging economies, with highly contagious possibilities. The role of the Federal Reserve of the United States and the way it proceeds is pivotal in this kind of scenario;

- The fourth scenario would be a coordinated recovery scenario, in which a combination of monetary and fiscal measures would be used to stimulate demand and to generate more expansionary response to economic adjustments. This would be a scenario in which strong financial regulations are used to reorient the nature of the financial system from asset speculation towards boosting productive capacities in the real economy. Redistributive measures would be used to deal with inequalities that could hold potential destructive implications for the world economy. Such kinds of policies are viable and would have win-win consequences for all parts of the global economy. This was the scenario that the G20 promised to deliver when it was re-established in 2009/2010.

Kozul-Wright underlined that such a scenario of coordinated recovery has been far from what has been seen in practice. It is possible to attribute some success to the G20 in regard to preventing a spiral down of the crisis, and bringing stability to the financial system. But there has been no sign that the G20 operated effectively to bring about a broader effective recovery, he stressed.

This situation begs the question on why this kind of coordinated response has failed to materialize. UNCTAD attributes that to four reasons, Kozul-Wright explained. First factor is the persisting dominance of unregulated finance in shaping the larger policy environment. Most reforms to the financial system have been cosmetic and in many instances non-existent. Second factor is the heavy reliance on monetary policy of unconventional nature, which restricted the policy options necessary for a balanced and coordinated response. Third factor is the continued dominance of the US dollar at the same time that the US has essentially forfeited its leadership role in the global economy. Fourth factor is that South-South cooperation, which has been flagged as a new hope for development in terms of coordinating efforts in the global economy, has yet to provide a meaningful alternative, both in terms of policy coordination in the South and in terms of a wider model for global policy coordination. Despite the optimism that many have in regard to South-South cooperation, it would be naïve to consider that as currently practiced it offers a serious alternative, Kozul-Wright noted.

Dr. Kozul-Wright stressed that the onus is much more on developing country policymakers to rethink their policies and pursue more selective and strategic policies, including better mobilization of domestic resources. He added that in the case of Latin American and African economies that have been heavily dependent on external flows, there is clearly a need to reorient policies to focus on internal markets as drivers of demand.

Dr. Kozul-Wright stressed the importance of limiting dependence on external markets, while increasing wages as engines for growth. In this regard, Kozul-Wright made reference to interventions such as minimum wage legislation and income policies. He also stressed the importance of raising public spending and public investment, and the ongoing need for industrial restructuring, along the need to revisit technology policies, and the role of development banks as an important source of credit expansion for longer-term affordable credit.

Dr. Kozul-Wright underlined that the Post-2015 agenda does open up real possibilities to articulate such kind of strategies in the multilateral context. Yet, he argued that at this stage developing countries have a lot of homework to do in order to ensure that these issues galvanize their positions in New York, since many of these issues are still not on the radar of developing countries’ negotiating positions in that forum.

The Latin American situation

Dr. Humberto Campodonico, professor at the National University of San Marcos in Peru, commenced his presentation by noting the lack of a unified macroeconomic response to the crisis by developed countries, leading the world to face the prospects of another financial and economic crisis.

Dr. Campodonico tackled the ‘decoupling thesis’ that was put forward in 2006/2007/2008, including by the IMF, which assumed that the newly industrialized countries (i.e. the BRICS) could take the relay when the developed countries were faltering.

Dr. Campodonico noted that in a globalized world one cannot speak of complete decoupling. What it essentially means, he added, is that a group of economies move from dependence on other economies, and have new engines of growth different from the old engines. He noted that the consequences of the lack of unified response to the macroeconomic crisis and the implications left on the BRICS countries and others is a clear demonstration that decoupling has not been the case.

In regard to the role of the United States, he noted that today there is no hegemony from one economic power anymore. The world has witnessed such hegemony in 1944, when the Bretton Woods system was created, Campodonico noted, and the world economy functioned with this drive...
during 35 years. Yet currently the global context reflects a lack of such hegemonic forces. On the political side, Campodonico referred to the cases of Ukraine, Syria, and the drive of China, which according to him reflect a lack of such hegemonic force. He also referred to the economic arena, where he reflected on the situation at the WTO and in the Doha Round. He noted that when there were disputes between the BRICS countries and the United States, European Union, and Japan at the WTO, the move was towards free trade agreements where WTO-plus rules have been pushed, including for example the Trans-Pacific Partnership (TPP) and Trans-Atlantic Trade and Investment Partnership (TTIP). Yet, this cannot be a solution on the longer term, Campodonico stressed.

After the 2009 UN Conference on the World Financial and Economic Crisis, the policy proposals addressed there have not been fully taken on, Campodonico cautioned. The US is not giving the IMF support in order to assume the role of lender of last resort.

Campodonico discussed the context in Latin America, where he highlighted the divide between the free trade and market policies adopted by the countries of the Pacific Alliance (Chile, Colombia, Mexico, and Peru) in comparison to what are called ‘Atlantic policies’ involving Venezuela, Brazil, Argentina and others. The latter adopted more development-focused policies directed towards domestic markets and South-South trade, he explained. This, according to Campodonico, is a confrontation that extends beyond economic policies and involves geopolitical aspects.

Another issue raised by Dr. Campodonico was the growing debt of private corporations. He noted that Latin America’s problems during the 1980s were mainly due to external public debt. Yet today, numbers show that private corporate debt is very high. He referred to new data released by the Financial Times, which shows for example that Peru’s external private debt has grown from 7% of GDP to 14.2%, which is bigger than external public debt. That is the case in other Latin American countries.

Campodonico noted that if tapering of the US ultra-easy monetary policy begins, and financial flows falter, and interest rates rise, the outcome could be problematic. He explained that the problem would be limited in the case of mining companies or other companies trading in international currency compared to the case of companies selling in the local markets, whereby the mismatch will be very hard to cover. There is very little data on these aspects given that the debt is in the private sphere, Campodonico added.

Dr. Campodonico noted that governments in Latin America considered that current account surpluses and fiscal positions would help them be shielded against systemic risk. Yet, these surpluses could evaporate very quickly, he stressed, especially that some of them are not current account reserves but borrowed money, including cash reserves accumulated at banks.

Dr. Campodonico added that Latin America has witnessed improvements in terms of trade like nothing seen since twenty or thirty years ago, in addition to an increase in financial flows since 2003. The question he raised was about the way in which these improvements have been used.

The degree of utilization of these inflows in order to have structural reform and in order to diversify the productive base has not been very strong in Latin America, Campodonico explained. In this regard, the United Nations Economic Commission for Latin America and the Caribbean (ECLAC) considered that Latin America has lost the decade. Latin American countries have been mostly very complacent about this super cycle.

He also called for distinguishing between export-led growth that involves a big component of industrialization and state intervention, such as the practice in South East Asia and China, compared to export-led growth in Latin America that has been orthodox-based and focused on natural resources. The statistics show a de-industrialization of Latin America. UNIDO’s statistics show that Latin America diminished its value-added in manufacturing of developing countries from 35% in 1992 to 17% in 2010.

Besides cautioning of potential difficulties ahead, Dr. Campodonico pointed out that Latin America cannot be seen in one case or scenario and he addressed a few country cases that he considered successful in their policy choices. He discussed the cases of Bolivia and Costa Rica that he considered have fared very well. Dr. Campodonico explained that Bolivia undertook important reform with oil and gas companies over the last two or three years. Real GDP has been growing (6.7% in 2013) and the overall fiscal balance improving, at a consistent pace, and without current account deficits. In Costa Rica, policy has been oriented towards attracting innovation technology companies. Costa Rica has explicitly stated that they do not want to depend on raw materials for their growth.

Dr. Campodonico summarized that the revenues gathered in recent years from natural resources have mostly been already spent. There has not been inter-temporal funds or pension funds, like in Norway, and most of the revenues have been spent quickly in infrastructure and current flows. So the bonanza has already passed and has not been sufficiently taken into account, because the main framework of appreciation was expecting these trends to last many years. In the meantime, industrial policies were not instituted.

Dr. Campodonico concluded by referring to the technological revolution that the world is witnessing. He questioned whether these trends in technological innovations could create long-term cycles of economic growth and whether they would leave positive long-term implications on the economic situation.
Countries’ policies are based on self-interest

Dr. Charles Soludo, member of the South Centre’s board and former governor of Nigeria’s Central Bank, indicated in a general comment that in terms of the response to the crisis and lack of coordination, what has been witnessed is what one expects in the real world. This is despite what one would ideally wish for. Yet, he called for searching and identifying the countries and sectors where opportunities lie.

Dr. Soludo’s first point was that we live in a multi-polar world, and the categories of developing and advanced countries are no longer useful. Most problems, including that of unemployment and lack of jobs, poverty, climate change, energy, and inequality are faced by every country; the difference is a matter of the degree of the problem.

Dr. Soludo explained that although categories are still needed, it is important to realize that there are even least developed countries that have been achieving significant progress, for example seeing growth rates exceeding 7% over several years. There are countries getting by, while others are being left behind, he noted.

In regard to interconnectedness and intensifying spillovers, Soludo noted that trade as a share of GDP has gone up to around 35%, while capital flows intensified more than 4 times compared to 1995. Yet, the mechanisms of cooperation globally are limited, Dr. Soludo cautioned.

Increasingly, policy choices are serving narrow domestic interests and not designed taking into consideration the collective interests in a global context. Less than one percent of policy makers’ attention is focusing on issues we wish them to focus on, such as interconnectedness and spillovers, Dr. Soludo noted.

Dr. Soludo referred to what he called the ‘threat from within’, Dr. Soludo underlined. Recovery remains fragile and a new crisis remains probable or imminent, Soludo cautioned. It is a race to the bottom as each country seeks self-insurance, he explained. Part of this self-help is sought by the United States through the TPP and by the European Union through the EPAs, which represents a bail out sought from the African countries and ACP.

Soludo underlined the importance of China’s economy to many other developing countries. He noted that China has been considered as the new market, especially for countries dependent on commodities and oil, where much of their exports have been directed. Yet, the old model that propelled China’s growth seems to be going out of steam. The question is for how long can this approach continue, Dr. Soludo noted, and what would happen to a lot of these countries if China slows down.

Soludo was of the opinion that China may indeed need to live on bubbles for an extended period of time, especially for poorer developing countries that shifted their dependence to China to be able to continue to live. Otherwise, the greater and more devastating threat could be resulting from a slowdown in China. Dr. Soludo referred to that situation as the ‘threat from within’ in the context of South-South integration.

In terms of the outlook for countries that are increasingly left behind, Dr. Soludo referred to what he called the ‘paradox of poverty’. He explained that poor communities often have greater incentives to bond together, but also have greater resentment among them. So if some money trickles down or gets promised from the EU or another party, he noted, some countries are prepared to sell their regions and the entire coordination mechanism among them would then collapse.

Dr. Soludo cautioned that African countries could suffer from intensified levels of poverty and inequality in the next few years if their coordination vis-a-vis the EPAs falls out. This will lead to wiping out the limited manufacturing capacity in the region. He underlined that the aid promised to African countries is not additional and in fact has been declining. He added that Europe has its own crisis, and cannot support others.

In conclusion, Dr. Soludo noted that in a world with a dominant reserve currency, where policy makers are mostly of the time preoccupied with domestic welfare and hardly deal with global welfare, future crises happen to be almost an inevitable feature of the global economy as it is currently designed. However, Dr. Soludo stressed, not everyone will suffer in the same way.
Attempts to further constrain South’s policy space

Egypt’s Ambassador in Geneva, H.E. Mr. Walid Mahmoud Abdelnasser, agreed with previous speakers about the weakness of the international economy, which he saw still suffers from global imbalances and structural complexities. Several years after the onset of the financial crisis, Ambassador Abdelnasser noted, the world economy remains in a state of disorder. The burden of adjustment of the global imbalances, which contributed to the outbreak of the financial crisis, remains with the developing countries. In 2008 and 2009, there have been calls and willingness worldwide for urgent reforms of the international monetary and financial system, however, the issue disappeared from the international agenda, he recalled.

Ambassador Abdelnasser was of the opinion that the outlook for the global economy and for the international environment enabling development continues to be highly uncertain. The expansion of the world economy, though favorable for many developing countries, was based on unsustainable global demand and financing patterns, he added. Within this state of uncertainty and volatility of the international economic environment, the developing countries that adopted the export-oriented growth model began to suffer due to unilateral economic measures taken by some developed countries, he added.

Ambassador Abdelnasser stated that “development is not properly addressed in the international economic context”. He added that “there are attempts to divert the responsibility regarding development from the international scene to be confined only within the national levels, while ignoring the global imbalance and the international constraints that limit the policy space for the developing countries to identify their priorities”. As an example he mentioned the case of a developing country that would like to formulate industrial policy to enhance its productive capacity in an infant industry. He considered that such a country could be challenged by its international commitments stipulated in the multilateral trade agreements that often shrink the policy space required for development needs.

Ambassador Abdelnasser added that the attempts to further constrain this policy space are incessant. The developed countries are trying to establish norms that go beyond the development priorities of the South, he noted. Those attempts are clear in the multilateral negotiations in all issue-areas, including trade, climate change, intellectual property, investment, among others. In this context, the norm setting in various regimes focuses on establishing global rules and high standards without paying a real attention to the various developmental needs of the developing countries, Ambassador Abdelnasser cautioned.

For example, in the area of intellectual property, the focus remains on the protection and enforcement of intellectual property and not on the technology transfer and the equitable benefit sharing. It is ironic that some developing countries, such as India, are being criticized for formulating development-oriented intellectual property policy, Ambassador Abdelnasser stressed. In the climate change area, Ambassador Abdelnasser recalled the backtracking on the previously well-established principle of ‘common but differentiated responsibilities’, whereby the developing countries are being asked to pay for the historical mistakes of the others.

In the area of trade, the Doha Development Agenda has not yet been implemented after 13 years of stalemate, and there is no certainty that the previously expected developmental gains will be harvested, Ambassador Abdelnasser noted. He stated that “instead, the narrative that is being promoted in trade policy is that globalization and interdependence are driven by Global Value Chains, and the only way for any country to secure its share in the Global Value Chains is through extensive trade liberalization”. However, he added, “this approach neglects the reality that the global imbalances made the distribution of shares in Global Value Chains entirely asymmetrical”.

Ambassador Abdelnasser recalled UNCTAD’s breakdown of the distribution of the global valued-added in 2013 using OECD-WTO database, which shows the following: 67% accrue to OECD countries, 8% from Newly Industrialized Countries I (Singapore, Hong Kong, Taiwan, Korea), 3% from Newly Industrialized Countries II (Malaysia, Thailand, the Philippines), 9% from China, 5% for other BRICS (India, South Africa, Brazil, Russia), 8% for all other developing countries and LDCs. Those indicators clearly demonstrate the structural constraints faced by the small players within the Global Value Chains, Ambassador Abdelnasser stressed.

Ambassador Abdelnasser concluded that the global economy needs systemic reform to address the global imbalances. Furthermore, development must be placed at the core of the multilateral negotiations in all issue-areas.
The object of this book is to analyze the evolution of developing countries in the world economy, situated in a long term historical perspective, from the onset of the second millennium but with a focus on the second half of the twentieth century and the first decade of the twenty-first century. It is perhaps among the first to address this theme on such a wide canvas that spans both time and space.

In doing so, it highlights the overwhelming significance of what are now developing countries in the world until 200 years ago to trace their decline and fall from 1820 to 1950. The six decades since then have witnessed an increase in the share of developing countries not only in world population and world income but also in international trade, international investment, industrial production and manufactured exports which gathered momentum after 1980.

The book explores the factors underlying this fall and rise to discuss the ongoing catch up in the world economy driven by industrialization and economic growth. Their impressive performance, disaggregated analysis shows, is characterized by uneven development. There is an exclusion of countries and people from the process. The catch up is concentrated in a few countries. Growth has often not been transformed into meaningful development that improves the wellbeing of people.

Yet, the beginnings of a shift in the balance of power in the world economy are discernible. But developing countries can sustain this rise only if they can transform themselves into inclusive societies and people from the process. The catch up is concentrated in a few countries. Growth has often not been transformed into meaningful development that improves the wellbeing of people.

The book Catch Up by Deepak Nayyar was launched during the South Centre Conference held in March 2014 in Geneva. Below is an abstract of the book.

Comments on the book

`Essential reading for anyone who wants to get a balanced understanding of the history of the world economy. It offers a breath-taking historical sweep. A masterpiece.´

-Ha-Joon Chang, University of Cambridge, author of Kicking Away the Ladder and 23 Things They Don't Tell You About Capitalism

`Nayyar analyzes lucidly the ongoing change and discusses forcefully the prospects for this great transformation, how it will be brought about, and what it will imply for the world order which will emerge.´

-Joseph Stiglitz, University Professor, Columbia University, New York, and Nobel Laureate in Economics
Ambassador Nathan Irumba, executive director of SEATINI, said that the greatest challenge facing Africa at this moment is the negotiations of Economic Partnership Agreements (EPAs) with the European Union (EU). EPA negotiations have been going on since 2002.

Ambassador Irumba highlighted the interface among EPAs, the multilateral trading system, and regional integration. He explained that the relation of the African, Caribbean, and Pacific (ACP) countries with the EU was governed by the Lome and Cotonou conventions, whereby the ACP countries enjoyed non-reciprocal trade preferences. The relationship was based on three pillars: dialogue, development and finance, and trade. The Cotonou Agreement was judged to be incompatible with the WTO rules. At the Doha Ministerial Conference, the EU and ACP countries were granted a waiver with a view to making the agreement WTO compatible. The negotiations on that track started in 2002.

Ambassador Irumba explained that the objectives of the partnership between the EU and ACP countries include ensuring sustainable development, smooth integration in the global economy, and eradication of poverty. Principles enshrined in the partnership are sustainable development, reciprocity, and special and differential treatment (SDT). As the negotiations emerged, tension was revealed among these principles, specifically the principles of reciprocity and SDT, Ambassador Irumba noted.

In terms of reciprocity, which is one of the necessities of Article XXIV of the General Agreement on Tariffs and Trade (1947) that addresses ‘Territorial Application - Frontier Traffic - Customs Unions and Free Trade Areas’, the question arises on what constitutes ‘substantially all trade’ on which duties and other restrictive regulations of commerce shall be eliminated for a free trade area to be considered compatible with Article XXIV.

Ambassador Irumba said that the EU Commission has taken advantage of the negotiations and Article XXIV of the GATT to pursue the ‘Global Europe’ agenda, whereas one would have expected the negotiations to be confined to minimum provisions that conform to the principles of the WTO. The approach under the ‘Global Europe’ agenda extends beyond the WTO requirements.

The EU Commission defined ‘substantially all trade’ as requiring liberalization up to 80% of trade by ACP countries, while the EU offered liberalization of 100% in return. That is considered quite deep liberalization, Ambassador Irumba underlined, and wondered whether it will be in the interest of African countries to undertake such liberalization.

It was noted by Ambassador Irumba that under the WTO negotiations on non-agricultural market access (NAMA), least developed countries (LDCs) and most African countries are not expected to undertake reductions under the proposed formula.

Another aspect highlighted by Ambassador Irumba is the whole question on the EU’s demand for prohibition or limitations on export taxes. The EU is worried about the appetite of China and India in regard to Africa’s raw materials, the Ambassador noted. African countries insist that they need export taxes. Yet, on the question of agricultural subsidies, the EU insists that this issue should be discussed within the WTO and should not be discussed within EPAs.

Another contentious aspect highlighted by Ambassador Irumba is the most-favored nation (MFN) principle, whereby he explained that the EU insists that any preferential treatment offered by African countries to emerging developing countries, such as India or Brazil, should be offered to the EU as well. Yet, under the WTO, trade among developing countries was supposed to be covered by the Enabling Clause (1979), he highlighted.

At all these levels, there is an attempt to go beyond what the African countries offered in the WTO and what the WTO requires.

Ambassador Irumba also discussed the question of the ‘rendezvous clause’, whereby the EU requires partner countries to commit to discussions on issues like intellectual property and trade facilitation. So far, there are no substantive negotiations on these areas, but the EU insists on a timetable in this regard, Irumba explained.

In regard to duty free quota free (DFQF) market access, Ambassador Irumba noted that this preference is offered under the Cotonou agreement. As an interim measure, the EU in 2002 established a regulation that allows African countries to continue accessing DFQF as negotiations evolve. Yet,
the EU with full support of the European Parliament had lately announced that by the first of October 2014 any country that has not signed and ratified the EPA will be denied access and benefit from DiQf, Ambassador Irumba underlined.

Some countries like Kenya are pressured to sign. Yet, SEATINI is advising governments to consider the anatomy of their exports to the EU before taking a decision in regard to EPAs. Most exports by African countries to the EU are primary commodities that are covered by the Generalized System of Preferences (GSF), since the EU needs them. The only two products that will be affected are flowers and fish, Ambassador Irumba explained. In the case of fish exports, Mr. Irumba argued for prohibition of fish exports due to the threat of depletion.

Furthermore, Ambassador Irumba tackled the question of how the EPA negotiations affect regional integration. He noted that although African countries are supposed to gradually phase in tariff reductions, they would likely end up narrowing down the regional markets for African products, which would end up having to compete with EU products. Another issue highlighted by Ambassador Irumba is accumulation. African countries want to be able to cumulate with South Africa, as part of the regional integration among the Common Market for Eastern and Southern Africa (COMESA), East African Community (EAC), and the Southern African Development Community (SADEC), yet the EU has been opposing this process.

Ambassador Irumba called for protecting the space for Africa’s regional integration. He cautioned that the United States (US) is monitoring the EPA negotiations and has gotten interested in seeking a trade and investment agreement with East African countries. Whatever African countries offer to the EU would be demanded by the US, Ambassador Irumba noted. He stressed that the next few months are critical as far as African countries are concerned with EPA negotiations. He called for concluding lessons from the experience of the CARIFORUM countries that have signed EPAs yet did not achieve much gains so far from the agreements.

Mr. Abhijit Das, head of the Centre for WTO Studies at the Indian Institute of Foreign Trade, addressed the outcomes of the 9th WTO Ministerial Conference held in Bali. The first key outcome he discussed was the binding agreement on trade facilitation (TFA). Mr. Das noted that the agreement is a significantly diluted version in terms of binding commitments compared to what was on the negotiating table around nine months before the conference in Bali. That was possible only because of stiff resistance and opposition by developing countries, he noted. Yet, the TFA as finalized at Bali does have a large number of difficult and onerous obligations that developing countries have to implement, Mr. Das added.

The agreement envisions a phased-in approach for implementation. It gives WTO Member countries some flexibility to self-designate, on individual basis, the provisions a country will implement upon the TFA’s entry into force, which would be considered ‘Category A’ commitments. Countries have the right to choose amongst the remaining obligations which ones to implement over what phasing period, Mr. Das noted. That is a significant flexibility that developing countries should take advantage of. There would be pressures expected on countries to limit their phase-in periods, but developing countries need to insist that the Bali text offers flexibilities that should be made use of, Das stressed.

The second decision taken at Bali that Mr. Das addressed was that on public stockholding programs for food security purposes. The decision has two parts; the first part is a commitment to set a work programme towards finding a permanent solution on this issue; and second is a due restraint provision that would apply in the interim until a permanent solution is agreed.

While the decision has some positive elements that are considered as considerable improvement over the draft text sent for the Bali Ministerial Conference, Das noted, however there are additional conditionalities included in the text at Bali that are likely to prevent developing countries from resorting to the interim mechanism. Mr. Das explained that the main assurance gained in Bali, and which was missing in the text transmitted to the Ministerial, was that the interim due restraint will remain in place until a permanent solution is achieved.

Apart from that, the Ministerial conference in Bali took a decision on tariff rate quotas (TRQs), with the objective of making TRQs more transparent and ensuring they are filled at higher rates. In respect to cotton, the mandate given in the Hong Kong Ministerial Declaration required countries to address this issue ambitiously, expeditiously and specifically. There has been no tangible progress towards reducing cotton subsidies under this mandate, Das explained. Under the Bali Ministerial Declaration, a transparency and monitoring mechanism in relation to trade-related aspects of cotton would be established, however the core problem remains unaddressed, Das noted.

In respect to duty-free quota-free (DiQF) market access, the Bali Ministerial decision does not even match the relevant decision taken at Hong Kong in 2005, Das argued. The Bali decision is considerably diluted as it merely requires countries to “seek to improve” their existing DiQF coverage, he explained.

Mr. Das concluded that the Bali Ministerial Conference did not come up with anything concrete apart from the TFA and food security decision.

There is one area where the Bali Ministerial Conference is very relevant for the next twelve months, Das noted. The Trade Negotiations Committee (TNC) has been directed to prepare,
within the next twelve months (i.e. by the end of 2014), a clearly defined work programme for the post-Bali phase. However, it is not clear whether the work programme will result in cherry picking of a few issues from the Doha mandate or whether all Doha Round issues will be addressed, Das cautioned.

While there is a mention of the "work programme on the remaining Doha issues", the intent appears to focus the work programme on a few issues, Das added. The work programme is mandated to build on the decisions taken at the Bali Ministerial Conference, particularly on agriculture, development and LDC issues. In addition there is a mention of "all other issues under the Doha mandate that are central to concluding the Round". Yet, the language keeps a window open for cherry picking of a few issues instead of addressing all remaining issues, Das highlighted. If, indeed this is the case, then developing countries need to carefully consider whether their interests lies in abandoning the Single Undertaking concept, Das stressed.

Das argued that if the post-Bali work programme departs from the Single Undertaking, such a step would raise serious questions in regard to the WTO jurisprudence. He explained that some of the key landmark dispute cases have been decided on the basis that WTO agreements have been negotiated as part of a Single Undertaking. Accordingly, Das questioned what would happen to the jurisprudence if the post-Bali work programme departs from the Single Undertaking.

When it comes to trade facilitation, Das called upon developing countries to take fullest advantage of the flexibilities provided in the agreement in terms of deciding which obligations to kick in upon entry into force of the agreement and which to phase in later. Developing countries need to put resources into mapping what they have of existing trade facilitation capacities and what additional steps will be required on their part for implementing their obligations, Das underlined. This is necessary so that they can seek thereafter technical and financial support.

A larger question that Mr. Das posed was whether the TFA should be implemented on a provisional or definitive basis. Das noted that there are legal grounds to argue that even if the TFA gets incorporated into the WTO acquis of agreements, it can be implemented on a provisional basis. It needs to be borne in mind that for more than four decades GATT itself was implemented on a provisional basis. If some developing countries want to take such a stand, there are legal arguments that could support such approach, Das underlined.

In regard to the issue of public stockholding programs for food security purposes, Mr. Das recalled that the draft modalities of December 2008 had an unbracketed paragraph that would have given considerable flexibilities for developing countries. That paragraph said that government stockholding programs for food security purposes with the objective of supporting low-income or resource-poor producers would not be considered part of the Amber box (i.e. the box under the Agreement on Agriculture that usually covers trade distorting subsidies). That should be the starting point of negotiations towards a permanent solution for public stockholding programs for food security purposes, Das noted.

If that does not work, then WTO Member countries can go back to one of the alternatives proposed by the G33 (i.e. a coalition of developing countries at the WTO pressing for flexibility for developing countries to undertake limited market opening in agriculture), one of which is to pursue further elaboration of Article 18.4 of the Agreement on Agriculture (AoA), which talks about giving due consideration to the implications of "excessive rates of inflation".

The G33 proposal proposes deflating the administrated price and comparing it with the 1986 to 1988 price, or taking the other way around through inflating the 1986-1988 price based on inflation indexes and comparing that to the administrated price. If the December 2008 text is not found to be generating consensus, then the consideration of Article 18.4 of the AoA could be one way to go forward, but certainly this would be a difficult issue, Das noted.

If the approach to the post-Bali work programme ends up to be a cherry picking process, Das added, then developing countries should identify the areas of key interest to them.

In agriculture, the dilemma before negotiators is whether they should consider the December 2008 text as a settled document and continue negotiations based on it. If that happens, then the possibilities for improvements in the area of Green Box subsidies (i.e. the Green Box under the Agreement on Agriculture that is considered to encompass non-trade distorting subsidies) will be lost, Das pointed out.

While the initial mandate did not talk on reducing Green Box subsidies, it did mention the need to clarify and improve the criteria of the Green Box subsidies to ensure they are not trade distorting or have minimal impact on production, Das explained. Good proposals have been put forward by the G20 (i.e. coalition of developing countries at the WTO pressing for ambitious reforms of agriculture in developed countries with some flexibility for developing countries) in 2007-2008 on the subject, but the group appears to subsequently have lost steam on this issue.

Das cautioned that if the Green Box support is not disciplined, WTO members would be missing out an opportunity to have a close examination of this area and to establish disciplines in this area, especially given that the bulk of the agriculture subsidies by developed countries have shifted from the Amber to the Green Box.

In agriculture, tariff simplification was another area tackled by Mr. Das. He explained that while most developed countries' tariffs are on ad valorem basis, there are still a high number of tariffs that are not on ad valorem basis, but take the form of specific duties and compound duties. In the case of the EU, many tariffs are based on very complex matrices, he added. The text on the table is rather liberal and would not result in big improvements in this area, Das noted.

In the area of export subsidies, strict implementation of what was decided in Hong Kong could give developing countries some assurance that export subsidies would be phased out, Das underlined. He highlighted that the Bali Decision provided that countries will 'exercise utmost restraint' in using export subsidies, and that is a fairly strong language. He called for holding WTO Member countries accountable to that strong language.

Another issue highlighted by Mr. Das was whether the TFA should be implemented on a provisional or definitive basis. It needs to be borne in mind that for more than four decades GATT itself was implemented on a provisional basis. If some developing countries want to take such a stand, there are legal arguments that could support such approach, Das underlined.
Das was special safeguard measures (SSM). That is a new right that developing countries were trying to acquire to counter surges in low priced imports. It resulted in stringent conditionalities being imposed on developing countries wanting to use such SSM. There is a need to ensure that if the SSM is finalized it be devoid of such stringent conditionalities, Das stressed, so that it becomes a practical tool which can be implemented whenever the need arises.

In the area of non-agricultural market access (NAMA), the key challenge for developing countries is sectorals, according to Das. Sectorals were supposed to be non-mandatory, yet there were pressures especially on emerging economies that they must join sectorals. Das acknowledged that some emerging economies might catch up with developed economies, but highlighted that such a catch up would happen in too far a future. So developing countries taking on obligations by joining sectorals at this juncture amount to taxing their future gains, Das concluded. The other challenge in this area is the request-offer approach, Das added. Instead of negotiating using a formula, the current approach appears to be shifting into a request-offer approach, whereby developing countries will be exposed to huge amounts of bilateral pressure.

Das also spoke about some important positive agenda items for developing countries, to focus on in the area of ‘implementation issues’. These, he explained, have receded from the radar and countries have not been addressing them. He tackled three important areas that could be of interest to developing countries;

In the area of the Agreement on Trade-Related Investment Measures (TRIMS), one implementation issue was that developing countries shall have another opportunity to notify existing TRIMs measures which they would then be allowed to maintain till the end of a new transition period. Another issue in this area was that developing countries shall be exempted from the disciplines on the application of domestic content requirements by providing for an enabling provision in Articles 2 and 4 of the Agreement to this effect. It is clear from the work in the subsidies committee and the TRIMS committee that even developed countries, in the area of renewable energy, are resorting to domestic content policies. So it is justifiable that developing countries should not be forced to abide by disciplines on local content, Das stressed.

In the area of the agreement on Subsidies and Countervailing Measures, Das highlighted that one of the implementation issues to be considered could be giving a certain flexibility to developing countries in offering export credits.

In the area of the TRIPS agreement, an area of possible interest to a large number of developing countries could be the links with the Convention on Biological Diversity (CBD), Das noted. There are quite a few proposals arguing that in the case of a patent based on traditional knowledge, there must be full disclosure and prior and informed consent from the holder of the traditional knowledge as well as benefit sharing. Such proposals galvanize large support from developing countries and would hold significant commercial value for developing countries. One study, highlighted by Das, estimated that out of 111 plant-based drugs, 74% was estimated to have been in prior use by indigenous communities. Another study concluded that by using traditional knowledge as a ‘lead’, bio-prospectors could increase success ratio in trials from 1 in 10,000 to 1 in 2. Clearly such an implementation issue has a commercial value, Das stressed.

Das underlined that the Doha mandate has strong language on ‘implementation issues’, which notes that utmost importance shall be attached to these issues that shall be addressed on priority. Lots of work has been done between 2002 and 2005, after which these issues became quite dormant. Das stressed that the mandate on addressing these issues exists, yet what is required is for developing countries to take these issues as priority. He underlined the importance of reigniting coalitions among developing countries to work on some of these issues.

Das went on to discuss issues beyond the Doha mandate, whereby he noted that the most complex 21st century issue is global value chains (GVCs). Under the GVC narrative, he explained, some countries are expected to demand that WTO agreements need to be updated in order to take account of this phenomenon, arguing that an increasingly larger share of world trade is taking place through GVCs. These countries could ask for negotiating new rules on this issue. Such new rules could include zero tariffs on products that are covered by GVCs, very deep liberalization in services that centre around GVCs, and prohibition of remedies on products that are covered by GVCs, Das noted. It could also imply stringent investment protection rules and restrictions of governments’ ability to provide support to state-owned enterprises, as well as a push towards upward harmonization across countries. It could also imply something on labour standards, which was alluded to in the report of the panel set up by the previous director general of the WTO, Pascal Lamy, which was entitled “The Future of Trade: The Challenges of Convergence” (24 April 2013). Many of these issues, which developing countries have previously rejected, could come through the back door under this approach.

Das cautioned that GVCs have a large number of asymmetries; the significant portion of incomes in GVCs essentially accrues to the lead firms that are based in developed countries. There are studies that clearly indicate that developing country firms are effectively prevented from undertaking functional upgrading, which in turn limits the possibility of increasing their incomes. GVCs might be a reality, Das noted, but he questioned whether trade policy measures are preventing countries from participation in their GVCs. He rejected this assumption, highlighting that policies other than trade policy are hindering developing country participation in GVCs, calling for addressing those issues first.

On climate change, Das noted that what could happen is the demandeurs could seek flexibility whereby unilateral trade measures taken pursuant to provisions of Article 3.5 of the United Nations Framework Convention on Climate Change (UNFCCC) would not be challenged under the WTO’s Dispute Settlement Mechanism. That could pose another barrier for exports from developing countries, according to Das.

Das concluded by stressing that the 21st century issues might seem
Strong resistance to FTAs and the new issues

A mbassador Rubens Ricupero, board member of the South Centre, former minister of finance in Brazil and former Secretary General of UNCTAD, was of the opinion that countries are facing a sort of ‘no man’s land’ in terms of WTO negotiations. On one hand, they are no longer in the pre-Bali phase where there was enormous uncertainty whether the WTO would be able to conclude the trade facilitation agreement (TFA) and whether it could survive as a viable negotiating forum.

The international community believed that it could not afford a failure of the WTO, so there was a special effort made to reach a sort of success. What was achieved was a very relative and modest success, Ricupero stressed, but in a way it provided what it was expected to do, which is just to show that the WTO is still alive and should continue. Ambassador Ricupero reminded participants that we are not yet in the ‘promised land’ and do not know whether negotiations will really resume in seriousness and whether they will be conducted with a sense of urgency.

Ambassador Ricupero alluded to what was discussed by Mr. Das and supported his points. However, Ricupero highlighted that on selected areas, such as on agricultural safeguards, exporting developing countries would find difficulties in granting safeguards without any kind of conditionalities.

Ambassador Ricupero noted that most of the international interest in trade negotiations lately has focused on the Trans-Pacific Partnership (TPP) negotiations or the Transatlantic Trade and Investment Partnership (TTIP) negotiations, and not on the post-Bali prospects or even on the WTO. He added that there is very scant interest in WTO matters outside Geneva.

Regarding those two macro negotiations (i.e. TPP and TTIP), it has been interesting that contrary to the initial expectations that these negotiations would be concluded in a few months, the actual prospects are much more subdued and resistance is growing, Ambassador Ricupero highlighted. What seems particularly new and interesting is that the resistance is growing inside the main proponents of the negotiations, basically in the United States and in some European countries.

This situation brings back to mind what happened in the so-called multi-lateral negotiations on investment under the OECD initiative, Ricupero recalled, where there was an enormous build-up of expectations and then the negotiations collapsed. The collapse resulted from the resistance that started to grow inside the countries that were more engaged in those negotiations.

Ambassador Ricupero noted that the so-called free trade agreement negotiations are focusing mostly on negotiating extra trade issues and in reality there is very little trade in those negotiations. The old issues addressed in the Tokyo and Uruguay Rounds, such as agriculture tariff peaks and tariff escalations, remain unfinished business. Among other issues, these remain an agenda that developed countries refuse to address until these days.

Ricupero added that developed countries are forcing onto the negotiations table issues that are not purely trade matters like intellectual property, the unjustified expansion of patent owners’ rights beyond any reasonable limit. They are trying to deepen liberalization of financial services irrespective of the disaster that the deregulation of financial services brought to the US and to the countries that followed the US model in this area. Developed countries are trying to further promote the ability of transnational corporations to litigate against sovereign states, Ricupero added. These matters that are extra trade mainly reflect the interests of big corporations that want to expand their rents, Ricupero stressed.

Ambassador Ricupero positively noted the rise of public awareness and opinion on these issues. He highlighted the refusal of US senators to grant Fast Track authority because they are aware that such kind of extra-trade agreements will cost jobs and will aggravate the situation of inequality. Ricupero stressed that inequality is the basic problem that is becoming the unifying theme in building the resistance against these kinds of negotiations. People see that those negotiations will bring more inequality and more concentration of wealth and resources, Ricupero added. It is a comfort to see that experts like Paul Krugman and Joseph Stiglitz are finally starting to say what UNCTAD has been saying for forty years at least, Ricupero highlighted. Sometimes even the IMF is beginning to see the light in some aspects, according to Ricupero.

Ambassador Ricupero concluded by stressing that his message focuses on the need to go back to basics; instead of continuously bringing new issues into the negotiations, there is a need to deal with the old and indispensable issues that have been long forgotten, including agriculture, tariff peaks and escalations, the problem of cotton, along the long list of issues that wait for some degree of fairness in international economic relations.

---

WTO post-Bali agenda...

(Continued from page 22)

...attractive, but he called upon developing countries to assess the ramifications of agreeing to negotiate these issues and to carefully study the likely outcomes and whether these outcomes will be to their benefit. Das was of the view that if there is no mutual benefit, then it makes sense for developing countries to come together like they did in Cancun and take a stand against these issues whenever they are raised.
Addressing the issue of commodities

Ambassador Ali Mchumo, former Managing Director of the Common Fund for Commodities and former Ambassador of Tanzania to the UN and WTO, said that in the post-Bali period at the WTO, developing countries face the challenge of following up on the decisions taken in Bali, especially the unfinished areas of the negotiations. In regard to the Trade Facilitation Agreement, Ambassador Mchumo highlighted the need to address the gap reflected in the lack of financial resources necessary to implement the agreement and to ensure it results in positive outcomes for developing countries. Otherwise, as it stands, the agreement would help the main exporters rather than developing countries, Mchumo noted.

In regard to the future of the negotiations, Mchumo called on developing countries to emphasize the centrality of development in interpreting and implementing the WTO agreements. He stressed that the preamble of the WTO agreement clearly emphasizes that the main objective is to ensure that developing countries and peoples of the world have better living standards. Accordingly, Mchumo added, the question of development should be at the center of all endeavors at the WTO.

Ambassador Mchumo was of the opinion that the post-Bali negotiations should focus on completing the Doha Development agenda, and whatever has been achieved in Bali should only be part of a long process to fulfill this agenda. Mchumo emphasized the importance of giving concrete content to the special and differential treatment (SDT) provisions in favor of developing countries especially LDCs, so that they can benefit from the multilateral trading system.

Mchumo called on developing countries to stand firm against the introduction of new issues or non-trade issues, including the Singapore issues that were previously rejected (except for trade facilitation).

With regard to the process of negotiations, Ambassador Mchumo emphasized the importance of inclusivity and transparency, so that developing countries take full role in the decisions taken. He highlighted the importance of being creative during the post-Bali negotiations in order to allow issues that are important for development to be negotiated first.

Ambassador Mchumo discussed also the issue of commodities, which he stressed remains a major issue that needs to be addressed. The importance of commodities for the economies of developing countries - as a source of food and employment, as a source of foreign exchange, and as one of the main goods that many of the developing countries sell to the global markets - cannot be emphasized enough, according to Mchumo.

While commodities play such a major role in the economies of developing countries, they remain marginally considered under the multilateral trading system and in the WTO, Ambassador Mchumo highlighted. In fact, it is only in the Hong Kong declaration (2005) that commodities were mentioned for the first time as an issue of concern to the WTO.

One of the issues to be addressed in this regard is how to ensure that the producers of commodities benefit from the multilateral trading system post Bali. According to Ambassador Mchumo, there are many elements in the commodities problematique; some could be addressed by national governments, and could require a wider framework of international cooperation. These include supply side problems, assisting in infrastructure in order to ensure commodities reach the market, irrigation, and storage. These are issues that are not expected to be addressed within the WTO, but should be kept in mind as issues influencing what happens in the multilateral trading system, Mchumo explained. Moreover, among the issues that require more national attention and wider international cooperation are adding value to commodities and diversification, Mchumo added.

According to Ambassador Mchumo, there are three major concerns on commodities that should be addressed within the multilateral trading system;

First, trade distorting measures in commodities’ trade that adversely impact the producers, such as tariff peaks and escalations as well as market access and domestic support, and this of course is part of the negotiations on agriculture;

Second is the question of value chains, which remains imbalanced. It is common to see that only few multinational corporations control the procurement of commodities; for example in the area of cocoa, only three multinational companies deal with the procurement of 60% of cocoa production. In coffee trade, which is worth more than USD 90 billion, less than USD 5 billion accrue to producers. Ambassador Mchumo called for addressing this imbalance in the multilateral trading system and for empowering the commodity producers and developing countries in order to have a bigger bargaining power in the multilateral trading system.

Third is the issue of price decline and price volatility, which remains the biggest and most long-standing problem that needs to be addressed by the multilateral trading system in regard to commodities. Ambassador Mchumo recalled the thesis of Prebisch and Singer on this issue, who have highlighted that the prices of commodities in the long-term would decline compared to manufacturing. This is still true in the long-term cycle, Mchumo noted. But in the short-term cycles there could be price rises as have been witnessed during the past few years due to the increasing demand for commodities, including by China and India, Mchumo added. However over the long-term, the prices of commodities will continue to decline vis-à-vis
industrial goods, according to Mchumo.

Ambassador Mchumo added that the question of price volatility is no longer a North-South issue, as there are major developing countries that play an increasing role in the export and import of commodities. Early attempts, during the 1960s, to address price declines and volatility have failed. Mchumo recalled the attempt to establish an international commodity agreement to address the supply and management of commodities. He also noted that UNCTAD’s work on management of stocks in order to achieve price stabilization was another attempt. However, during the 1980s, the interests of developed countries on price stabilization decreased.

Ambassador Mchumo called for thinking of a mechanism that allows developing countries to have a say in how to manage price stability and volatility. One of the causes of price decline is the mismatch between supply and demand, and accordingly there has been consideration of various supply management schemes. The African group in the WTO suggested in 2006 that there should be a system whereby countries can negotiate how to establish supply management schemes using provisions of Article XXXVIII of the GATT 1994. But this proposal has not been pursued since then. Mchumo also highlighted the attempts to establish compensatory finance mechanisms, which he considered to be an area that could be revisited.

Ambassador Mchumo concluded by highlighting the growing mood against the existence of institutions that would manage commodity trade. In many advanced countries, he noted, there is a feeling that commodity institutions should not be pursued and that the markets should play their role in this regard. Japan, for example, recently withdrew from the international coffee agreement. The Common Fund for Commodities is almost on its death bed. In this situation, Ambassador Mchumo stressed, think tanks should discuss how to revive the interest in the management of commodities so that developing countries and LDCs that depend on these commodities could fare better in the multilateral trading system.

Dr. Carlos Correa speaking at the South Centre conference.

Dr. Carlos Correa, special advisor on trade and intellectual property of the South Centre, addressed current trends related to the protection of intellectual property (IP) and made a few references to negotiations in this area. He recalled that during the last twenty-five years, the trend in IP has been inclined towards expansion and increasing protection. The Trade-related Aspects of Intellectual Property Rights agreement (TRIPs) had a very important role in globally increasing this protection, Dr. Correa noted. In addition, the World Intellectual Property Organization (WIPO) adopted two treaties in relation to copyright law that incorporate new standards in this area. Furthermore, free trade agreements contain substantive chapters on IP that incorporate a large number of TRIPs-plus standards, which increase the terms of protection for patent holders. This, according to Dr. Correa, has been part of a trend towards expanding protection of intellectual property rights.

Dr. Correa explained that this trend has been strongly supported by unilateral action from developed countries. These actions have been mainstreamed through very different means, including intervention by Ambassadors, and efforts to make the case that these protections are important to increase benefits.

Dr. Correa gave the example of the pressures facing India in order to increase protection of IP. He explained that an investigation was started in the United States against India, arguing that the latter is not fulfilling the standards that the US considers to be appropriate in relation to IP. The case argues against India’s granting of a compulsory license and attacks Section 3(d) of India’s patent act. Consequently, India is facing the threat of loosing trade preferences in the United States that are estimated to be around 4 billion USD of exports. Dr. Correa noted that this action has been prompted by business associations, including the pharmaceutical industry.

According to Dr. Correa, there are two ironies in this situation. The first irony is that the United States has granted the largest number of compulsory licenses in the world, amounting to thousands, including for pharmaceuticals. In contrary, India has granted one compulsory license for an anticancer drug because its price was exorbitant. A second irony is that there is no complaint submitted before the WTO claiming that India is violating WTO rules. India is being judged under the rules that the United States considers unilaterally as best for the United States’ companies. If there were violation of the TRIPs agreement by India, then there would be a case in front of the WTO. Consequently, Dr. Correa noted that such action by the United States is undermining the legitimacy of the WTO system. He recalled a statement made by the South Centre on March 4, 2014, whereby the Centre calls on WTO Members to respect the rights of other Members to avail themselves to WTO flexibilities.

Dr. Correa questioned whether the trend towards expansion of IP protection is justified by evidence that such protection would lead to more innovation and economic development. According to Dr. Correa the reply is that there is no such evidence. On the contrary, economic and academic studies, especially by American economists, have been skeptical about the role that intellectual property might play in promoting innovation.

One of the studies recalled by Dr.
Correa claims that such IP protection is not promoting but might deter innovation. Dr. Correa quoted Scherer who is a reputable Harvard professor. Scherer has noted that “as economic studies have shown repeatedly, patents do not play a particularly important role in most fields of industrial innovation”. Dr. Correa also referred to Gary Becker, a Nobel prize winner, who has noted that “the current patent length of 20 years (longer for drug companies) from the date of filing for a patent can be cut in half without greatly discouraging innovation”.

Furthermore, Dr. Correa recalled Lerner’s work, who is a professor at Harvard Business School. Lerner had surveyed patent laws in over sixty countries and came to the conclusion that strengthening patent rights resulted in an increase in filings from foreign applicants with no effect on filings by local inventors.

This paradigm shift about intellectual property is growing so strong that two economists from the United States had published a study during 2013 suggesting that public policy should aim to decrease patent monopolies gradually but surely, while the ultimate goal should be the abolition of patents.

Dr. Correa stressed the importance of highlighting these trends because in Geneva the approach still insists on the old argument that intellectual property necessarily will promote innovation and economic development. Yet, what has been said and written as outcome of investigations in developed countries is leading to a different approach.

Another question raised by Dr. Correa concerned the possible limits or changes to the upward trend in IP protection that has been witnessed during the last twenty-five years. On this issue he noted that some elements may show that maybe we are at a time where relentless increase in intellectual property protection might to some extent be stopped.

Besides economists in the United States, concerns with the negative effects of patents and IP in general are increasing among businesses. For example, the Computers & Communications Industry Association (CCIA) that includes members such as Google, Motorola, Microsoft, E-bay, and Yahoo had made the following statement: “we do not think it is an accident that innovation has flourished in a society that values an open, competitive economic marketplace, nor where original independent and free speech are enshrined in law...Therefore our commitment to vigorous competition, freedom of expression, and openness is a natural product of the understanding of what has helped our industry thrive, and what it needs to continue to do so”.

These companies know that they are spending more money on lawyers than they are spending on research and development, according to Correa. They know that they could innovate better in an open system rather than in a system based on strong appropriation of innovation.

Dr. Correa also highlighted the emergence of civil society involvement in addressing the implications of an increase in protection of intellectual property, especially by organizations working on issues related to the internet. Dr. Correa referred to the anti-counterfeiting trade agreement (ACTA); he explained that there was an attempt by the United States and a small group of countries to develop a new agreement that would increase the enforcement measures in the area of intellectual property. This agreement was negotiated in secrecy, and was put forward for ratification by the group of countries that prepared it. Civil society organizations emerged against this agreement, taking into the streets in manifestation of opposing it. Many European countries, such as Poland, decided not to ratify this agreement. This movement was successful, and the ACTA did not get the number of ratifications that was needed. It was rejected by the European Parliament by a vote of 478 against 39.

Another example given by Dr. Correa relates to developments in the United States; there were two bills submitted to Congress - one called ‘Stop Online Piracy Act’ and another called ‘Protect Intellectual Property Act’. Those bills would have allowed the US government to block websites, even foreign ones, on the ground that there might be violations of intellectual property. There was a very strong reaction against these propositions, including a number of street mobilizations. The outcome was that these bills were not adopted.

According to Dr. Correa, these developments show that there might be some obstacles for further increase in IP protection.

Dr. Correa also demonstrated some updates from selected developing countries where legislation were adopted or court decisions were taken that mitigate the effect of monopoly rights conferred by intellectual property. For example, through the amendment of its Patent Act in 2005, India introduced a section that includes rigorous standards for the assessment of chemical and pharmaceutical inventions, on which there is already a decision and interpretation by the court that protects against ‘evergreening’ (The term ‘evergreening’ stands for granting patents for frivolous developments that are acquired to block competition by the generic industry.)

More recently, Argentina adopted a number of very specific guidelines for pharmaceutical patents based on rigorous standards in order to avoid proliferation of patents. Ecuador has also recently launched a comprehensive reform of its intellectual property system, aiming at integrating intellectual property into its wider national policies. This, according to Dr. Correa, is a good example of a country that is trying to integrate intellectual property as an instrument within its national policies and strategies and not an intervention that is developed in an isolated manner or copied from what is done in other countries.

South Africa was another example cited by Dr. Correa, where the government has announced the reform of the intellectual property system, in particular patents. South Africa is considering the introduction of prior examination of patents, in particular for pharmaceuticals. Today, patents in South Africa are granted without examination, and consequently thousands of patents are being registered for very minor developments. The government of South Africa found that pharmaceutical companies have been funding a lobbying firm in order to derail its efforts to amend the patent system.

Dr. Correa referred as well to a decision taken by the Kenyan high court overturning the counterfeiting bill due to human rights considerations. He also noted other interesting court decisions in Ecuador and Argentina that...
deny data exclusivity, which has been one of the demands of the US and the EU (data exclusivity refers to the protection of clinical test data required to be submitted to a regulatory agency to prove safety and efficacy of a new drug).

Some governments, including developed country governments, are increasingly becoming cautious about the upward trends of protecting intellectual property. For example, the Productivity Commission in Australia has said that “an increase in intellectual property rights in a country which is a net importer of technology is likely to benefit overseas rights holders disproportionately compared with domestic rights holders”.

In the UK, Professor Hargreaves’ Report to the government indicated that “government should ensure that development of the IP System is driven as far as possible by objective evidence. Policy should balance measurable economic objectives against social goals and potential benefits for rights holders against impacts on consumers and other interests. These concerns will be of particular importance in assessing future claims to extend rights or in determining desirable limits to rights”.

Dr. Correa also noted that some governments are being advised or are taking measures in order to avoid increased levels of protection. For example, the Marrakesh Treaty that was recently adopted in order to introduce an exception in the area of copyright for people with limited visual capacity is the first international treaty to establish an exception and not to increase the levels of protection.

To conclude, Dr. Correa underlined the possibilities for a paradigm shift in the international intellectual property regime. He stressed that there is a clear change in the way academics and governments think of intellectual property, and which has impact on the way governments act and courts take decisions. Also, the public is increasingly involved in trying to prevent the increase in the level of protection. The academic community is strongly critical of the intellectual property system, both in developed and developing countries.

While some years ago there was some sort of policy monopoly on the IP discussion by IP experts or practitioners, Dr. Correa was of the opinion that this monopoly has been broken. The simplistic argument made by the practitioners that more intellectual property leads to more innovation and economic development is not sustainable. There are many ways in which this assumption has been discredited, he added. Moreover, there is growing skepticism about the positive effects of intellectual property, including in developed countries. Dr. Correa called upon negotiators at WIPO and the WTO to acknowledge that there is a change in the way intellectual property is addressed and thought of, and to reflect this change in their negotiations.

Dr. Correa ended his presentation by referring to a proposal made by Bolivia to declare living matters non-patentable, and a submission made by Ecuador in connection to patentability of technologies that are sound for the environment. He called for looking at these proposals in light of the shift of paradigm on intellectual property.

Climate change and indigenous rights

human rights and climate change, which according to her presents an enormous threat to a number of human rights, including the right to water, food, land and basic survival of peoples around the world. Climate change usually affects the most vulnerable in society, including the poorest communities, the indigenous peoples, and women. They are most affected by the impact of climate change even if they have not contributed significantly to this problem, Ms. Tauli-Corpuz highlighted.

According to Ms. Tauli-Corpuz, the human rights approach compels us to look at the lives of the peoples that are most adversely affected. She highlighted the case of the Philippines that had suffered from typhoon Haiyan while climate change negotiations were taking place in Warsaw. She explained that the Philippines is a middle-income developing country, with 7.6% GDP growth achieved in the first half of 2013. Yet, the Philippines could not cope with the devastation it faced. It was estimated that a loss of 12 billion dollars resulted from the implications of the typhoon. Those affected included 4.2 million people that were displaced and more than 300,000 people that are still living in shelters de-
Despite all the contributions provided to the Philippines, Ms. Tauli-Corpuz noted that this case also affected the indigenous peoples of the Philippines.

She underlined that developing countries have not contributed to the climate change problem and the historical responsibilities do not lie with them. Yet, developing countries are being asked to carry the burden of adapting and mitigating in the face of climate change, without any support from the countries that have caused these problems.

This is the biggest tension in the negotiations, Ms. Tauli-Corpuz stressed. She added that developing countries’ interests in these negotiations have been undermined by industrialized countries.

Ms. Tauli-Corpuz went on to discuss the situation of indigenous peoples in the world, noting that they are estimated to be around 400 million, forming 5% of the world’s population and yet making up 15% of the poorest population of the world. Indigenous peoples live on 22% of the land area of the world, which contains around 80% of the biodiversity of the whole world, she explained. Most of the remaining tropical rainforest today is found in indigenous peoples’ territory. Yet, the rights of indigenous peoples who live in these areas are the ones most violated.

According to Ms. Tauli-Corpuz, the rights-based approach will preset great potential in regard to getting human rights courts and bodies to treat climate change as an immediate threat, and to get governments to improve their commitments and consider the extra-territorial impacts of their actions.

Ms. Tauli-Corpuz reflected on a few successes within the climate change negotiations, which according to her include the integration of human rights in the discussions held at the 2010 United Nations Climate Change Conference held in Cancun. She also mentioned the decision taken in regard to gender and climate change. Ms. Tauli-Corpuz also addressed the work on reducing emissions from deforestation and forest degradation (REDD) specifically installing safeguards to ensure the protection of the rights of local indigenous communities to the forest as well as to their traditional knowledge. Ms. Tauli-Corpuz noted the agreement achieved at the Warsaw Climate Change Conference (2013) on an international mechanism on ‘loss and damage’. This agreement reflects an understanding that focus should not be limited on adaptation when a country is subjected to short-term and long-term impacts of climate disasters. Some countries lost part of their territories and some islands are sinking as a result of climate change. This international mechanism would address such cases.

Ms. Tauli-Corpuz concluded by stressing that there is a lot of work that needs to be done in terms of considering human rights and climate change.

Conclusions on the trade session

Mr. Martin Khor concluded the session by reminding participants of key messages highlighted by various panelists.

He stressed the case made that EPAs will damage domestic economies, and that there is need to seek alternatives, and protect flexibilities that have been fought for at the WTO, such as the exemption provided for LDCs from reducing their tariffs, and the flexibilities fought for in the new trade facilitation agreement.

Mr. Khor also reminded the participants of the need to continue negotiations on a food security permanent solution post-Bali and to relook into the criteria of the Green Box subsidies.

On the issues of NAMA, Mr. Khor recalled the concerns about the new modalities that might be introduced in NAMA. He also stressed that the old modalities, such as the Swiss formula, would have drastic impacts on developing countries that will come under such a formula. He noted that the world has changed since these proposals have been developed, and a lot of lessons have been learned from the financial crisis. He asked whether developing countries could bear the burden of such a formula in a period when their economies are under pressure, many of which are facing balance of payment deficits due to the global crisis.

Mr. Khor also recalled the warning against ‘non-trade issues’, while the issues demanded by developing countries since before the WTO was established have not been addressed up till today. Mr. Khor echoed Ambassador Ricupero’s call for going back to basics in trade negotiations.

Mr. Khor also recalled that the issue of commodities was the main concern for developing countries, and that UNCTAD excelled in bringing up the commodities issues through the commodities agreements that were successful at one stage. Yet, according to Khor, this work has been put aside under the pressure from the Reagan and Thatcher administrations that decided they do not want to cooperate in this area. While developing countries became a bit complacent with the boom in commodities prices that was witnessed during the last few years, all the concerns related to commodities will come back with the softening of this price rise, calling for more work in this area.

He also questioned whether issues such as the commodity problematique should be addressed at the WTO or whether it should be addressed by UNCTAD, stressing that the multilateral trading system is not only the WTO but includes UNCTAD and many other institutions.

On the issues of IP, Mr. Khor recalled that the judiciary in the United States is arguing that there is no case for patenting of human genes, which is another example of the rethinking taking place on the role of IP protections.

On the issue of climate change, Mr. Khor stressed that under a human rights based approach developed countries are required to take the lead in cutting emissions and in supporting developing countries through the provision of finance and technology transfer.
Tribute Seminar for Gamani Corea

On 20 March 2014, the South Centre organised a Special Tribute Seminar to commemorate the life and intellectual legacy of Dr. Gamani Corea of Sri Lanka, former UNCTAD Secretary-General (1974-1984), member of the South Commission (1987-1990) and Chair of the Board of the South Centre (2002-2003). This South Centre event was organised with the support of the Permanent Mission of Sri Lanka and was held at the UNCTAD building in the Palais des Nations, UN Office in Geneva.

By Adriano Timossi

Dr. Gamani Corea passed away in Sri Lanka on 3 November 2013. Dr. Corea started his career at the Central Bank in Sri Lanka where he later became director of economic research. He was also the Permanent Secretary to the Ministry of Planning and Economic Affairs, playing a key role on Sri Lankan economic policy. In 1963 he was invited by Raul Prebisch to join the team involved in the preparation of the first UNCTAD Conference in 1964, an organisation which he served later as Secretary-General from 1974 to 1984.

Dr. Gamani Corea was also instrumental in the establishment of the Group of 77 and later in the 90s, the South Centre, having previously served as a member of the South Commission (1987-1990) and a decade later as a member and chair of the Board of the Centre (2002 to 2003). Dr. Corea promoted domestic and international economic policies aimed at the benefit of the poor and of the developing countries. He contributed to reinforce unity among nations of the South and their position in multilateral negotiations.

Dr. Corea introduced the Integrated Programme for Commodities - commonly known as the Corea Plan - one of his finest achievements that had led to the establishment of the Common Fund for Commodities. The influence of Dr. Corea on the decision to establish the Highly Indebted Poor Countries (HIPC) initiative is also another of his accomplishment, having previously chaired the Expert Group of the Non-Aligned Movement on Third World Debt which served as the basis for the HIPC initiative. He was a strong proponent of a New International Economic Order (NIEO), and under his tenure, UNCTAD experienced one of the most active periods of its history.

The Special Tribute Seminar of the South Centre

The Special Tribute seminar of the South Centre not only paid tribute to this eminent South thinker but also focused on the intellectual thinking represented and furthered by Dr. Gamani Corea’s legacy as many of his ideas and thoughts continue to be relevant to current debates in search of alternatives to the developmental challenges the Global South is facing today.

In his role as moderator of the opening session, Mr. Martin Khor, Executive Director of the South Centre, said that Dr. Corea, apart from his well-known role at UNCTAD, G77 and in Sri Lanka, was also very instrumental in the establishment and the operations of the South Commission and the South Centre.

H.E. Mr. Benjamin Mkapa, Chair of the Board of the South Centre, called Dr. Corea, a statesman and one of the most eminent economists of the developing and developed world.

A great contributor to the cause of the South and to South-South cooperation, Dr. Corea was one of the twenty-eight members of the South Commission which functioned from 1987 to 1990 under leadership of the former President of Tanzania, Julius Nyerere, who was the Chair of the South Commission and of the former Indian Prime Minister Manmohan Singh, who was the Commission’s Secretary General.

Dr. Gamani Corea provided immense intellectual and personal support to His Excellency Julius Nyerere. The Commission led to the report entitled “The Challenge to the South”, a must-read report launched in 1990, which led to the establishment of the South Centre, and which described developing countries as existing on the periphery of the North, and as mostly weak and powerless in the world arena. The report emphasised the need for greater cooperation among countries of the South. Dr. Gamani Corea remained closely associated with the South Centre from its inception in 1991 and for being one of the “founding fathers” of the Centre by providing it with policy and substantive guidance to its work, thus assisting Mwalimu Julius Nyerere to gradually build the Centre into an institution with a global name and standing and making possible its transformation into an intergovernmental organisation of developing countries for promoting and safeguarding their interests.

In his message delivered to the seminar, Dr. Mukhisa Kituyi, Secretary-General of UNCTAD, called Dr. Corea an "embodiment of the confident South." During his tenure in UNCTAD from 1974 to 1984, he advanced key issues such as debt relief; the Common Fund; launching of the GSTP; negotiations on a code of conduct for the transfer of technology.
began; and the discussion on a new international economic order. A man of brilliant diplomatic skills, Dr. Corea had successfully managed North-South dialogue in a constructive direction. He also recalled one of his “lasting consequence[s]”, the UNCTAD’s Trade and Development Report, launched by Dr. Corea in 1981 and led by Mr. Gerassimos Arsenis.

H.E. Mr. Ravinatha Pandukabhaya Aryasinha, Ambassador of the Permanent Mission of Sri Lanka in Geneva, highlighted key points of Dr. Corea’s career from Sri Lanka to the UN. Dr. Corea played an “active role in reinforcing unity among nations of the Global South and their position in multilateral negotiations”. Dr. Corea’s “vision and active role in the promotion of South-South and North-South Cooperation remains an inspiration for all”.

Gamani Corea: life and work

Noting the overwhelming participation of former colleagues of Dr. Gamani in the South Centre Special Tribute Seminar, Ambassador Rubens Ricupero, former Secretary-General of UNCTAD (1995-2004), said that “this is not something that happens every day and it is in itself a tribute without words”. Dr. Corea played a key role in the consolidation of UNCTAD “because he had the wisdom of understanding what was behind the apparently arid legal problem of the role of UNCTAD within the United Nations organisation”. Ambassador Ricupero referred to the period when there was a temptation to turn UNCTAD into a specialised agency of the UN with its “own budgetary process and for all practical purposes, almost completely independent from New York in administrative matters” instead of it remaining a subsidiary body of the General Assembly which would keep UNCTAD “protected against the pressure of the powerful”.

Mr. Chakravarthi Raghavan, Editor Emeritus of the South-North Development Monitor (SUNS), provided a detailed and insightful description of his extensive discussions with Dr. Corea, the events and ideas shared over many decades of good friendship since the earlier times when he met him as a diplomat for Sri Lanka in New York. Mr. Raghavan said that “he had an inner conviction and strength, and an outlook that was visionary, developmental and egalitarian”.

The intellectual legacy of Dr. Gamani Corea

The session on “The intellectual legacy of Gamani Corea” was moderated by Professor Deepak Nayyar, Professor of Economics at Jawaharlal Nehru University. He said that Gamani’s contributions to the profession of economics, to the international community, to Sri Lanka, to development, to the cause of the South, have made him a man of many parts.

Dr. Saman Kelegama, Executive Director of the Institute of Policy Studies of Sri Lanka (IPS), gave a comprehensive overview of the approach of Dr. Gamani Corea to the Commodity Price Stabilization highlighting some of its successes and failures from the Integrated Commodity Programme to the Common Fund, two of the most important instruments of the commodity price stabilization strategy advocated at that time and considered by many the finest of his achievements.

Mr. Michael Sakbani, former Director of UNCTAD’s Divisions of Economic Cooperation, Poverty Alleviation, and Special Programs, spoke on the Monetary and Financial Issues in UNCTAD under Gamani Corea’s tenure.

Mr. Gerassimos Arsenis, former Director of the Money, Finance and Development Division of UNCTAD, the first to lead the UNCTAD’s Trade and Development Report, launched by Gamani in 1981, spoke on Gamani’s role on global management, interdependence of money, finance and trade, and the debt burden of developing countries.

Mr. Jan Pronk, former Deputy Secretary-General of UNCTAD, spoke on one of the most memorable concepts coined by Gamani Corea: The Development Consensus. “The motivating factors now are not only the political need to respond to the problems of newly-emerging nations or the humanitarian compulsion to alleviate poverty and reduce the widening gap between rich and poor countries. There is now also the need for a framework of international economic relations which provides for the maximum utilization of mutually reinforcing and interacting forces for growth and prosperity throughout the world economy”. A reflection that well defines today’s challenges.

Mr. Michael Zammit Cutajar, former UNCTAD staff and former Executive Secretary, UNFCCC, brought another perspective of Gamani’s work, the environment pillar, a less well known work but which had equally great impact. Gamani was a pioneer on the interface of “development and environment”, later known as “sustainable development”. In fact, Gamani was one of the very few development economists from the “South” mobilised as a Special Adviser to Maurice Strong during the preparations for the 1972 Stockholm Conference on the Human Environment.

Adriano Timossi is Programme Officer of the Global Governance for Development Programme (GGDP) of the South Centre.
